Field Note:

The methodology used for program budget development is the result of analysis of the smaller Children's Medical Program (CMP). The smaller model is then used in producing a financial projection for the total program cost (MCH). This methodology has been used with respect to MCH Title V Block Grant since 2003.

TITLE V MATERNAL & CHILD HEALTH SERVICES BLOCK GRANT
STATE PROFILE FOR FY 2009
[SEC. 506(A)(1)]
STATE: MS

1. State MCH Administration:
(max 2500 characters)

The Mississippi State Department of Health (MSDH) is the state agency responsible for administering the Title V program in Mississippi. Maternal and Child Health (MCH) Block Grant funds are allocated in the MSDH central office to the Offices of Women's Health and Child/Adolescent Health. The Children's Medical Program (CMP) is the program of services for Children with Special Health Care Needs, and is located organizationally within Health Services (HS), which is responsible for all maternal and child health functions. These two HS Offices provide services for the three major populations targeted by the MCH Block Grant; pregnant women, infants, children, and children with special health care needs. Health Services is also responsible for administering the statewide Family Planning program and the Women, Infants, and Children (WIC) Supplemental Food Program.

6. Other Funds (Line 5, Form 2)	\$ 0
7. Program Income (Line 6, Form 2)	\$ 0
8. Total Federal-State Partnership (Line 8, Form 2)	\$ 18,486,681

9. Most significant providers receiving MCH funds:

The University of Mississippi Medical Center
The Jackson Medical Mall

10. Individuals served by the Title V Program (Col. A, Form 3)

a. Pregnant Women	22,154
b. Infants < 1 year old	46,046
c. Children 1 to 22 years old	34,249
d. CSHCN	3,069
e. Others	101,377

11. Statewide Initiatives and Partnerships:

a. Direct Medical Care and Enabling Services:
(max 2500 characters)

The Mississippi Department of Health's MCH programs are often the first point of entry into the health care system for many women and children. MSDH maternity services are carried out in areas where there are gaps in providers, resulting in approximately 20 percent of women who give birth in Mississippi receiving services in county health departments. The Children with Special Health Care Needs (CSHCN) program provides regional services throughout the state. Early Periodic Screening Diagnosis and Treatment (EPSDT) services statewide are being conducted by the MSDH, and the percent of children being screened is rising. The MSDH partners with the University of Mississippi Medical Center's School of Dentistry to provide sealants to children in the Mississippi Delta area. Enabling services consist of case management services for pregnant women and infants through the Pregnancy High Risk Management (PHRM) Program, for special needs children through the Children's Medical Program and Genetics, and for infants and toddlers with special developmental needs and their families through the EPSDT program. Genetics supports approximately 7 genetic satellite clinics strategically located in the state to make services more accessible to patients and families. The Special Supplemental Food Program for Women, Infants and Children (WIC) complements all MCH programs by serving as a catalyst to bring mothers and their into an integrated health care system. WIC services are provided by the MSDH in all 82 counties.

b. Population-Based Services:
(max 2500 characters)

Mississippi continues to expand in population-based services. MCH supported staff in county health departments provide approximately 70 percent of all immunizations in Mississippi, and was one of two southern states to earn national recognition for coverage in basic immunizations. The Division of Genetics Services completed Mississippi's first annual Birth Defects report consisting of confirmed birth defects in 2000. Genetics Services also expanded from 5 to 40 disorders, providing babies born in Mississippi the most extensive genetic screening of any state program. Newborn hearing screening is conducted among infants born in Mississippi, and infants with confirmed losses receive follow-up services and are referred to First Steps Early Intervention Program. Lead screening is occurring with a primary focus of serving children on Medicaid. Sudden Infant Death Syndrome (SIDS) counseling is carried out statewide by trained staff such as social workers and nurses.

c. Infrastructure Building Services:
(max 2500 characters)

Mississippi is growing in terms of infrastructure building. A cooperative agreement between the MSDH and the Mississippi Primary Health Care Association (MPHCA) provides a mechanism for joint perinatal planning and education between the state MCH program and the 21 community health centers in the state. Perinatal providers are placed in communities of greatest need through a joint decision-making process of MPHCA and the MSDH's Office of Primary Care Development. The need for systematic planning for oral health has resulted in the hiring of a full-time Public Health Dentist who works collaboratively with the statewide Oral Health Advocacy Committee to develop strategies to improve oral health care for all Mississippi children. In an effort to continue improving its infrastructure, the MSDH is strengthening data systems by upgrading the vital records operating system, linking the new birth and death files with program files, adding systems such as the Pregnancy Risk Assessment Monitoring System (PRAMS), enhancing the WIC data system, and strengthening data systems in all MCH programs.

Row Name:

Column Name:

Year: 2005

Field Note:

Data in the past had been entered by number of total screenings conducted over the number of total births. However, it was determined that MS needed to enter the number of follow ups to positive/presumptive positive screens over the total number of positive/presumptive positive screens. Therefore the numbers this year are different from other years.

PERFORMANCE MEASURE # 02

The percent of children with special health care needs age 0 to 18 years whose families partner in decision making at all levels and are satisfied with the services they receive. (CSHCN survey)

Field Level Notes

1. **Section Number:** Performance Measure #7

Field Name: PM07

Row Name:

Column Name:

Year: 2007

Field Note:

Mississippi's Immunization rate (4:3:1:3:3) for children 19-35 months of age has declined over the past few years mainly due to children missing the 4th dose of DTaP. Tracking and follow-up is needed to make sure the MSDH does not miss opportunities to vaccinate. Additional reminder recall systems are being reviewed to be put in place to let parents become aware that shots are due.

Data reported was pulled from the Mississippi Immunization Annual Two Year Old Survey of children who completed 4:3:1:3:3: series by 27 months of age.

2. **Section Number:** Performance Measure #7

Field Name: PM07

Row Name:

Column Name:

Year: 2005

Field Note:

Percentages, numerators and denominators are derived from a yearly survey conducted by the MSDH Immunization department. MSDH surveyed 981. Out of that we were able to locate and review 859 immunization records. 87.6% of those children were complete at 2 yrs of age. By sampling the immunization records of 19-35 month olds, the MDH is able to generate immunization rates consistently.

2. Section Number: State Performance Measure #8**Field Name:** SM8**Row Name:****Column Name:****Year:** 2006**Field Note:**

According to data received from the Division of Medicaid, the numerator for this measure is based on select dental procedure codes for oral health preventive service, and paid claims to dental providers only. The number does not include an oral health preventive service provided by a primary care practitioner.

The following information was provided by Division of Medicaid, explaining the differences from previous years:

Topical Application of Fluoride became a covered service in January 2007 causing in increase in the number of oral health preventive services received by Medicaid-eligible children ages 1-5, and is reflective in the numerator for 2007 being larger than those in 2004, 2005, and 2006.

FORM 14
LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: MS FY: 2009

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. Increase EPSDT/preventive health services for children on Medicaid and SCHIP.
2. Decrease smoking among pregnant women
3. Decrease cigarette smoking among sixth through twelfth graders.
4. Reduce repeat teen pregnancies for adolescents less than 18 years old.
5. Address child/adolescent obesity/overweight issues
6. Increase oral health care and preventive services for children.
7. Reduce child/adolescent unintentional injuries
8. Decrease unhealthy behaviors, specifically alcohol and drug use and risky sexual behavior, for teenagers sixth through twelfth grades.
9. Maintain case management follow-up services for children with genetic disorders identified through MDH newborn screening.
10. Continue to improve and maintain developed data collection capacity for Title V population

SP # 1

PERFORMANCE MEASURE:

Percent of children on Medicaid and SCHIP who receive EPSDT and preventive health services well child visits.

STATUS:

Active

GOAL

To increase access to preventive health care and health care for children on Medicaid and SCHIP.

DEFINITION

Number of children who receive preventive screening over the total number enrolled.

Numerator:

Number of children age 0-20 enrolled in Medicaid and SCHIP who received a preventive screening during the past year.

Denominator:

Number of children 0-20 enrolled in Medicaid and SCHIP.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Statewide Data collection system on Medicaid and SCHIP

SIGNIFICANCE

Through screening programs, health education, preventive services and community interaction, services are designed to meet the specific needs of high risk groups and to promote positive health enhancing behaviors in the community. Health education for elementary school children is taught by health educators. Programs are age/grade specific and designed to promote proper health behaviors, encourage proper nutrition, and teach hygiene. Preventive health programs are provided to children identified by the screening program as being at high risk for disease.

SP # 2

PERFORMANCE MEASURE:

Current percent of cigarette smoking among adolescents grades 6-12.

STATUS:

Active

GOAL

To decrease cigarette smoking among 6-12 grade students

DEFINITION

Number of students (grades 6-12) reported to have smoked within the past 30 days divided by the total number surveyed during the reporting period.

Numerator:

The number of 6-12th grade public school students who report smoking cigarettes during the past 30 days

Denominator:

The total of 6-12 grade public school students who report smiking cigarettes during the reporting period

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Youth Risk Behavior Survey (YRBS) and the Youth Tobacco Survey (YTS)

SIGNIFICANCE

Cigarette smoking is the single most preventable cause of death in the United States. It has been estimated that one in five deaths is caused by tobacco use. Studies have shown the vast majority of smokers start before 18 years of age.

SP # 3

PERFORMANCE MEASURE:

Percent of pregnant women who smoke

STATUS:

Active

GOAL

To decrease cigarette smoking among pregnant women

DEFINITION

Number of women who report smoking while pregnant over the number who give birth during that same reporting period.

Numerator:

The number of women who report smoking while pregnant during the calendar year

Denominator:

The total of women who gave birth during the calendar year

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Data will be collected annually from Behavior Risk Factor Surveillance System (BRFSS) data and birth certificate records

SIGNIFICANCE

Smoking during pregnancy is associated with infant mortality, low birthweight and intrauterine growth retardation as well as negative effects in childhood. Both nationally and in Mississippi we have seen a significant increase in smoking among pregnant women aged 15-19. Not only do we want to stop the increases, we want to decrease smoking among pregnant women.

SP # 4

PERFORMANCE MEASURE:

Percent of children with genetic disorders identified through the MSDH newborn screening who receive case management services.

STATUS:

Active

GOAL

To provide case management services to children testing positive for genetic disorders to assure their enrollment in a follow-up treatment program.

DEFINITION

The number of children with genetic disorders provided with case management services over the number of children identified with genetic disorders.

Numerator:

The number of children with genetic disorders provided with case management services.

Denominator:

The number of children identified with genetic disorders.

Units: 1 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

Council of Regional Networks for Genetics Services Newborn and Clinical Annual Report, Birth Defects Registry, March of Dimes Birth Defects Foundation and MSDH Chart Reviews.

SIGNIFICANCE

Each year in the United States, an estimated 100,000 to 150,000 babies are born with major genetic birth defects. Children with these defects account for about 25 percent to 30 percent of pediatric hospital admissions. The total costs for care of children with defects exceed \$1 billion annually.

SP # 5

PERFORMANCE MEASURE:

The Rate of Repeat Birth (per 1000) for Adolescents Less Than 18 Years Old

STATUS:

Active

GOAL

To reduce the rate of repeat births among teenagers during the reporting period

DEFINITION

Number of repeat live births to adolescents aged less than 18 years of age during the reporting period over the number of live births to adolescents less than 18 years old during the reporting period.

Numerator:

Number of repeat live births to adolescents aged less than 18 years of age during the reporting period.

Denominator:

The number of live births to adolescents less than 18 years old during the reporting period.

Units: 1000 **Text:** Rate

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

MSDH Vital Statistics data on mother's age and births.

SIGNIFICANCE

Mississippi continues to lead the nation in the percentage of births to adolescents. In 1998, of the 8,598 births to adolescents in the state, 2,095 (24.4%) were repeat births. Adolescent parenting is associated with the lack of high school completion and initiating a cycle of poverty for mothers.

SP # 6

PERFORMANCE MEASURE:

Percent of children ages 0-5 on WIC classified as overweight

STATUS:

Active

GOAL

To reduce the rate of children on WIC who are classified as overweight

DEFINITION

Will be defined by WIC over the next reporting year.

Numerator:

The number of children age 0-5 on WIC classified as overweight

Denominator:

The number of children age 0-5 on WIC

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2010 OBJECTIVE

DATA SOURCES AND DATA ISSUES

WIC patient management system

SIGNIFICANCE

Mississippi is ranked as one of the most obese states in the United States. According to 2003 YRBSS data, over 16% of youth report themselves as being overweight and another 17% are at risk for becoming overweight. Physical education is at an all time low with limited funding available to address obesity issues in our state. Consequently, childhood obesity must be addressed as a public health problem through comprehensive multi-agency efforts to eradicate this growing public health concern.

SP # 7

PERFORMANCE MEASURE:

Percent of adolescents in grades 6-12 who are overweight or at risk for becoming overweight

STATUS:

Active

GOAL

To reduce the rate of teens who are overweight or at risk for becoming overweight

DEFINITION

Overweight and at risk teenagers.

Numerator:

The number of 6-12 grade public school students who report being overweight or at risk for becoming overweight

Denominator:

The number of 6-12 grade public school students surveyed during reporting period

Units: 100 **Text:** Percent

Column Name:

Year: 2007

Field Note:

The denominator used to calculate this rate is adjusted from the actual 2007 statewide 0-4 population estimate (219,282) to account for missing data due to non-reporting hospitals. The estimated denominator is calculated based on the percentage of hospital beds in the state accounted for in the reported data. As of June 11, 2008, hospitals reporting data used in this calculation account for 72% of all acute hospital beds in Mississippi. Therefore, the 0-4 population estimate was adjusted by 72% (219,282*.72=157883).

This rate may appear significantly different than estimates in prior years. Prior estimates were based on data from the tri-county Jackson metropolitan area only. The MSDH's asthma surveillance system has since expanded to collect statewide data. Due to incomplete data collection as of June 11, 2008, the denominator is adjusted by hospital bed coverage, as described in #1, to increase the validity of the estimate.

This is provisional data. Due to significant geographic variations in asthma hospitalizations, the data from hospitals that have not reported as of the June 11, 2008 estimate may significantly change the rate.

2003 through 2006 rates were estimated based on 2003 provisional data for three Mississippi counties (Hinds, Rankin, and Madison). This data included emergency department and outpatient visits in addition to inpatient hospitalizations, and the population denominators were estimated. The rates reported for 2003 through 2006 are inflated due to these errors. As of 2007 these errors have been corrected. Data for 63 of the 82 Mississippi counties have been collected and analyzed using actual population denominators adjusted to reflect the population accounted for by the data. The 2007 provisional rate reflects the updated data collection and analysis procedures. The 2003 through 2006 rates for the 63 counties using the corrected collection and analysis procedures are as follows:

2003: 52.4 per 10,000 (981/187174)

2004: 53.8 per 10,000 (951/208556)

2005: 50.89 per 10,000 (918/209511)

2006: 60.6 per 10,000 (1021/168525)*

1. Section Number: Indicator 05

Field Name: LowBirthWeight

Row Name: Percent of ow birth weight (<2,500 grams)

Column Name:

Year: 2009

Field Note:

No linked data file exists at this time. Data are calculated based on a combination of sources which include Vital Statistics and Medicaid sources.

There continues to be a need for data linkage with the Mississippi Division of Medicaid for the purposes of reporting accurate data in a timely manner and monitoring increases and decreases in utilization of Medicaid services that impact the programs of the Mississippi State Department of Health. The State Systems Development Initiative (SSDI) grant is being used to promote data linkage between the Mississippi State Department of Health and the Mississippi Division of Medicaid.
